

SINGLE-PIECE CLOTHING PROTECTIVE DEVICE

ABSTRACT: A single-piece napkin clip made of a flexible material, attached to the clothing of the wearer by hook (12). A napkin (24) is held in place over the clothing by spring (16) active jaws comprising base ridge (14) and moving ridge (15). Provision is made to slide a graphic piece into the front of the clip, held between top ridge (22) and bottom ridge (18). An optional notch (32) on the obverse of the clip facilitates adhesion to a garment button, in lieu of the use of the hook (12).
